PROFESSIONAL SUMMARY

Final-year Computer Science Engineering student with hands-on internship experience in automated data extraction, web scraping, and centralized data platform development, backed by a self-driven portfolio of full-stack and AI-integrated applications built independently. Proficient in Python and modern frameworks including Flask, FastAPI, and React, with practical exposure to machine learning, NLP, REST API design, and database-backed application development. Comfortable across the full development lifecycle — from data pipelines and backend APIs to responsive front-end interfaces — and quick to adopt new tools in fast-paced, remote-first environments. Seeking a full-time role as a Software Developer / AI Engineer building intelligent, production-grade applications.

KEY HIGHLIGHTS

3+	**1**	**5+**
Full-Stack Projects Shipped	Industry Internship	Frameworks & Platforms

EXPERIENCE

Data Automation & Software Development Intern
3C Customerization Technologies Pvt. Ltd. • ***Apr 2026 – Jul 2026***

- **Web Scraping & Automation:** Developed automated data-extraction solutions to collect structured data from multiple websites, designing reusable scripts to handle varying site structures and formats.
- **Centralized Data Platform:** Contributed to building a platform for storing, retrieving, and visualizing extracted data, supporting reliable downstream analysis and reporting.
- **Remote Collaboration:** Worked with mentor and team through regular progress catch-ups, following professional delivery practices, version control workflows, and strict data-security and confidentiality guidelines.
- **End-to-End Ownership:** Owned pipelines independently — from writing extraction logic to validating and structuring collected data — while managing timelines under real production constraints.

PROJECTS

Eccho-Tracker
FastAPI · React · Supabase

A full-stack mention-tracking platform with a FastAPI backend, REST APIs, a Supabase database, and a responsive React UI for real-time tracking.

- **Database:** Implemented database schemas and API endpoints in Supabase to store and query tracked mentions.
- **Dashboards:** Built dashboard views to visualize tracked data trends for end users in real time.
- **Performance:** Optimized API response times and structured data models for scalable operations.

AI-Based Medicine Recommendation System
Python · Flask · Machine Learning

- **Model:** Trained an ML model to predict likely diseases from user-input symptoms and recommend appropriate medicines.
- **Deployment:** Deployed the trained model through a Flask web application, enabling real-time predictions via a simple web interface.
- **Data Pipeline:** Handled data preprocessing, feature engineering, and model evaluation to improve prediction accuracy.
- **UX:** Designed the interface to present predictions and recommendations in a clear, accessible format.

Ecom Review Miner
Python · Selenium · NLP

Automated mining and sentiment extraction system designed for e-commerce reviews with structured data pipelines.

- Scrapes dynamic, paginated customer reviews using Python & Selenium.
- Performs NLP-based sentiment analysis and key phrase extraction.
- Structures raw review data into databases (MongoDB / JSON).

SKILLS & TECH STACK

Languages	Python
Web & Frameworks	HTML, React, Flask, FastAPI
Automation & Data	Web Scraping, Data Pipelines, Data Visualization, Google Sheets API
AI / ML	Machine Learning Basics, REST APIs, OOP

Tools	VS Code, PyCharm, JDK, Git/GitHub, Supabase

EDUCATION

B.Tech, Computer Science Engineering — First Class *(2022 – 2026)*
12th Standard: 60% | 10th Standard: 80%

LANGUAGES

English, Hindi, Marathi
