PROFESSIONAL SUMMARY

Final-year Computer Science Engineering student with hands-on internship experience in automated data extraction, web scraping, and centralized data platform development, complemented by a strong self-driven portfolio of full-stack and AI-integrated applications built independently. Proficient in Python, Java, and modern frameworks including Flask, FastAPI, and React, with practical exposure to machine learning, generative AI (Google Gemini), REST API design, and database-backed application development. Comfortable working across the full development lifecycle — from data pipelines and backend APIs to responsive front-end interfaces — and quick to pick up new tools and frameworks in fast-paced, remote-first environments. Seeking a full-time role as a Software Developer / AI Engineer where I can contribute to building intelligent, production-grade applications.

EXPERIENCE

Data Automation & Software Development Intern — 3C Customerization Technologies Pvt. Ltd.

Apr 2026 – Jul 2026

- Developed automated data extraction (web scraping) solutions to collect structured data from multiple websites, designing reusable scripts to handle varying site structures and formats.
- Contributed to building a centralized data platform for storing, retrieving, and visualizing extracted data efficiently, supporting reliable downstream analysis and reporting.
- Collaborated remotely with the mentor and team through regular progress catch-ups, following professional software delivery practices, version control workflows, and strict data-security and confidentiality guidelines.
- Worked independently on end-to-end pipelines — from writing extraction logic to validating and structuring the collected data — while managing timelines under real production constraints.

PROJECTS

Vision AI Analyzer · React · FastAPI · Google Gemini AI

- Built a full-stack web app powered by Google Gemini AI that analyzes uploaded images, extracts detailed content, and generates human-readable AI summaries.
- Designed a FastAPI backend to handle image processing requests and integrate with the Gemini AI API for real-time inference.
- Built a clean, responsive React interface for image upload, live analysis feedback, and summary display.
- Implemented error handling and response formatting to ensure reliable output across varied image types.

Eccho-Tracker · FastAPI · React · Supabase

- Designed and built a full-stack mention-tracking platform with a FastAPI backend, REST APIs, Supabase database, and a responsive React UI for real-time tracking and visualization.
- Implemented database schemas and API endpoints in Supabase to store and query tracked mentions efficiently.
- Built dashboard views to visualize tracked data trends for end users in real time.
- Optimized API response times and structured data models for scalable read/write operations.

AI-Based Medicine Recommendation System · Python · Flask · Machine Learning

- Trained an ML model to predict likely diseases from user-input symptoms and recommend appropriate medicines.
- Deployed the trained model through a Flask web application, enabling real-time predictions through a simple web interface.
- Handled data preprocessing, feature engineering, and model evaluation to improve prediction accuracy.
- Designed the user interface to present predictions and recommendations in a clear, accessible format.

SKILLS & TECH STACK

Languages: Java, Python, C (Basic)

Web & Frameworks: HTML, React, Flask, FastAPI

Automation & Data: Web Scraping, Data Pipelines, Data Visualization, Google Sheets API

AI / ML: Machine Learning Basics, Google Gemini AI, REST APIs, OOP, Data Structures

Tools: VS Code, Google Antigravity, PyCharm, JDK, Git/GitHub, Supabase

EDUCATION

B.Tech, Computer Science Engineering (2022 – Expected 2026)

12th Standard: 60% | 10th Standard: 80%

LANGUAGES

English, Hindi, Marathi
